How do I link a Panopto video to the Resources tool?

If you are using the default share settings in Panopto, students will need to authenticate their account for your course before accessing a recording in the Lessons tool. Please see How do I authenticate my Panopto account for a Sakai site? for instructions.

First, locate and copy the Panopto video embed code.

1. Hover your cursor over the recording and select Share.
2. The Link tab will be selected by default.
3. Copy the URL code into the clipboard (CTRL+C for PC or CMD+C for Mac).

Go to Resources.

Select Resources in the Tool Menu.
Select Actions, then Add Web Links.

From the **Actions** drop-down menu, select **Add Web Links**. This directs you to the **Add Web Links** page.

**Enter the web address URL and the website name.**

1. Paste the web address URL.
2. Enter the website name. This will appear as the title of the link.
3. Select **Add Web Links Now**.

**View resource on the page.**
